- **Https:// (same security level used with online banking)**

- **Servers are in a SAS 70 COLO compliant facility (in order to be SAS 70 compliant there is a long list of security elements that are audited by an independent 3rd party...we can produce the audit report if necessary)**

- **Access to our servers is protected by a bio-metric scan to get into the building (hand/fingerprint scan)...a card scan to get into the hallway (media scan)...another card scan to get into the room where the servers are located...and a key to gain access to the server itself.**

- **Utilize up-to-date firewall software on our hardware firewall appliance (the box that controls who can enter the network)**

- **Database is protected by three passwords which are only available to a couple IT people**

- **Application level security (when using our reporting tools you can only see data that you have permission to see...user level security)**
